A Dictionary of Scientific Terms Pronunciation, Derivation, and Definition of Terms in Biology, Botany, Zoology, Anatomy, Cytology, Embryology, Physiology (Classic Reprint) I. F. Henderson
Uttrary STEPHEN ROOK PREFACE Tins compilation was undertaken as it was thought desirable that there should be available to students and scientists, an up-to-date work somewhat on the lines of Stormonth sM annual of Scientific Terms (1879, republished 1903). It contains definitions of about ten thousand terms, including several hundred lately coined expressions, many of which have not hitherto appeared in a dictionary. The work is expected to supply a want felt by many students and other readers of theB iological Sciences, as the usual handy-sized dictionary contains comparatively few purely scientific terms. The subjects selected for treatment are Biology and its allies, A natomy, Botany, Zoology, Embryology, Cytology, Physiology; and some terms in Bacteriology and Palaeontology are included. In a first edition of a book of this kind, errors of omission are inevitable, as few people have convenient access to each textbook and treatise, even in one subject, as it makes its appearanceS uggestions for additions will be welcomed and noted for future use, and should be accompanied by the name of the work in which the original definition is to be found; derivation offers no difficulty as a rule, but pronunciation might be indicated by coiners of entirely new terms. In the etymological section, Greek words have been transliterated, as science and medical students are seldom acquainted with that language, and on the advice of an authority on Greek, the transliteration of certain combinations of letters represents the sound rather than the exact letters of the original; hence the frequent occurrence of such words as brangchia, hydor, etc. This work was begun by Mr J. H. Kenneth, who compiled most of the primary lists from which the whole has been elaborated. (Typographical errors above are due to OCR software and don't occur in the book.)
