Learning Rust Paul Johnson

Key Features

- Get started with the language to build scalable and high performance applications
- This book will help C#/C++ developers gain better performance and memory management, and build concurrent application on the server side
- Discover the power of Rust when developing concurrent applications for large and scalable software

Book Description

Rust is a highly concurrent and high performance language that focuses on safety and speed, memory management, and writing clean code. It also guarantees thread safety, and its aim is to improve the performance of existing applications. Its potential is shown by the fact that it has been backed by Mozilla to solve the critical problem of concurrency.

Learning Rust will teach you to build concurrent, fast, and robust applications. From learning the basic syntax to writing complex functions, this book will be your one stop guide to get up to speed with the fundamentals of Rust programming. We will cover the essentials of the language, including variables, procedures, output, compiling, installing, and memory handling.

You will learn how to write object-oriented code, work with generics, conduct pattern matching, and build macros. You will get to know how to communicate with users and other services, as well as getting to grips with generics, scoping, and more advanced conditions. You will also discover how to extend the compilation unit in Rust.

By the end of this book, you will be able to create a complex application in Rust to move forward with.

What you will learn

- Set up Rust for Windows, Linux, and OS X
- Write effective code using Rust
- Expand your Rust applications using libraries
- Interface existing non-Rust libraries with your Rust applications
- Use the standard library within your applications
- Understand memory management within Rust and speed efficiency when passing variables
- Create more complex data types
- Study concurrency in Rust with multi-threaded applications and sync threading techniques to improve the performance of an application problem

About the Author

Paul Johnson is 44, lives with his wife, dog, cats, and son, and drinks way too much coffee! For the last 4 years, he has been successfully developing mobile software for a range of companies in the UK, the U.S., and Australia. When he gets the chance, he can be found on the Facebook Xamarin Developer group where he is an admin.

Software-wise, Paul has developed code in BASIC, Z80, 6502, and ARM assembler, C, C++, C#, Pascal, and FORTRAN. He has won awards for programming and is a published author with Packt (Xamarin Mobile Application Development for iOS and Cross-platform UI Development with Xamarin.Forms) as well as acting as a mentor for a couple of new writers for Packt.
