- Deploy the web application to the cloud in a snap

In Detail

Spring MVC is the ideal tool to build modern web applications on the server side. With the arrival of Spring Boot, developers can really focus on the code and deliver great value, leveraging the rich Spring ecosystem with minimal configuration.

Spring makes it simple to create RESTful applications, interact with social services, communicate with modern databases, secure your system, and make your code modular and easy to test. It is also easy to deploy the result on different cloud providers.

Mastering Spring MVC will take you on a journey from developing your own web application to uploading it on the cloud.

You begin by generating your own Spring project using Spring Tool suite and Spring Boot.

As you develop an advanced-level interactive application that can handle file uploads as well as complex URLs, you will dive into the inner workings of Spring MVC and the principles of modern web architectures.

You will then test, secure, and optimize your Spring web application and design RESTful services that will be consumed on the frontend.

Finally, when everything is ready, you will release your application on a cloud provider and invite everyone to see.

Style and approach

An iterative hands-on approach in a conversational and easy-to-follow style. Each chapter will improve on the work done in the previous one until the application is ready to be released.
